

Locating a Site Assessor

A Site Assessor samples the soil during a tank removal and writes a report documenting if there is contamination and if so how much. The site assessment must meet the requirements of Chapter 691 Rules for Underground Oil Storage Facilities. The Department does not certify or register site assessors and, consequently, has not maintained a complete list of Assessors.

Tank Installers/Removers: The Department certifies underground tank installers/removers. Depending on the type of oil product stored in the UST a certified installer/remover may be required. These contractors generally subcontract Assessors or may recommend an Assessor. The Department can provide a list of certified tank installers/removers.

Yellow Pages: The following categories may be helpful:

Engineers Engineers-Environmental Engineers-Geotechnical Engineers-Civil
Engineers-Consulting Geologists Environmental & Ecological Products & Svces

List: The following list provided reports for calendar year 2002. The list includes site assessors who have conducted at least one site assessment in 2002. Some of these firms have more than one office location. Firms from outside of Maine are not listed.
